CASE SUSTAINABILITY

DP World first container terminal in Antwerp to present sustainability report

As the first container terminal in the port of Antwerp, DP World publishes a sustainability report. The report presents the company's sustainability achievements in the period from 2013 to 2016.

Sustainable investments

Some of the highlights of recent years have been DP World Antwerp's leading position in terms of safety in the port of Antwerp, sustainable investments - such as energy-efficient container stacker cranes, a wind turbine and a biogas power station, well-trained and committed staff.

Greenest terminal

DP World Antwerp wants to further set the tone in the coming years as greenest terminal in the port of Antwerp. This ambition fits in with the company's sustainability strategy "Our World, Our Future". Within the DP World Group, the Sustainability Report is the first report linked to the Sustainable Development Goals (SDGs), the 17 targets that the United Nations has set for the next 15 years to achieve a more sustainable world. In addition, the report was also drawn up in accordance with the guidelines of the Global Reporting Initiative (GRI), an international standard for sustainability reporting that enables objectification and comparison.

DP World intends to publish a report every two years from now on. The next one will be published in 2019.
